Blynt — Business User Guide

A Plain-English Manual for Business Owners, Managers & Bookkeepers

USER MANUAL

October 2026 Edition

Welcome to Blynt. This guide is written in clear, non-technical business language to help you navigate your finances, automate daily admin, and save valuable time every month.

1. Understanding Your Money: Transactions vs. Reconciliation

What is the difference between Transactions and Bank Reconciliation?

• **Bank Transactions (Your Daily Money In & Out):**
This is the activity feed from your bank accounts. As customer deposits arrive and bills are paid, each item appears here. Your goal is simply to review the description, verify the suggested category (e.g., *Software*, *Office Rent*, *Consulting Revenue*), and click **Confirm**.

• **Bank Reconciliation (Your Periodic Reality Check):**
At the end of the month, reconciliation checks that your internal books match your official bank statement balance down to the exact penny. It ensures no transactions were missed, duplicated, or entered with the wrong amount, giving you audit-ready confidence.

2. Personalizing Your Dashboard (Tick & Untick)

You can customize your home screen so that it only shows the information relevant to you.

- **How to edit:** Click the **Customize Dashboard** button right below your morning greeting on the home screen.
- **Tick or untick widgets:** Choose which of the 12 cards you want visible:
  - **Quick Actions:** Shortcuts to create an invoice, record a payment, or add an expense.
  - **KPI Numbers:** Cash Balance, Income, Expenses, Net Profit, Unpaid Invoices, and Bills Due.
  - **Charts:** 12-Month Cash Flow trend line and Income vs. Expenses breakdown.
  - **Data Tables:** Recent transactions, invoices awaiting payment, and bills coming due.
- **Instant Presets:** Choose *Executive View* for a clean high-level summary, *Operations* for fast daily admin, or *Minimal* for a compact view.
- Your selections are automatically saved and remembered every time you log in.

3. Managing Multiple Companies with One Login

If you operate several businesses or legal entities, you can manage them all under a single login:

Seamless Company Switching

- **Switch Companies in 1 Click:** Look at the top navigation bar. Click your current company name (e.g., *Test* or *Demo Consulting*) to view all your businesses. Click any company to instantly open its accounts.
- **Add a New Business:** Click **+ Add Company** in the dropdown menu. Enter the new business name, legal registration, and base currency. Blynt automatically provisions a fresh workspace with standard accounting categories ready to go.

4. Adding & Removing Bank Accounts

As your business opens new accounts or updates banking arrangements, you can manage them directly:

- **Adding an Account:** Navigate to **Banking & Accounts**, click **Add Bank Account**, and provide your account name (e.g. *Barclays Business Current*), account number, sort code, and starting balance. Blynt links it directly to your cash ledger.
- **Removing an Account:** If you close an account, click the options menu on the account card and select **Delete Account**. Safety protections prevent accidental deletion if active unreconciled records exist.

5. Smart Vendor Identification & Automated Bookkeeping

Traditional bookkeeping requires manually reading each transaction line and typing supplier names. Blynt automates this process:

How Automatic Identification Works

- **Recognizing Payees:** When a transaction like "*Adobe Creative Cloud Team License*" or "*Google Workspace 15 Users*" appears, Blynt recognizes the vendor as **Adobe** or **Google** and attaches an ✨ **AI Identified** badge.
- **Category Predictions (95%+ Accuracy):** Historical patterns automatically categorize recurring items under the right accounting code (e.g., *Software & Subscriptions*).
- **One-Click Confirmation:** Simply review the row and click **Confirm**. Your General Ledger and financial reports are updated immediately.

6. Your Built-in AI Financial Assistant

Save time drafting paperwork by using natural English prompts:

Task	How to Use It	Example Prompt
Draft Customer Invoice	Click **AI Draft Invoice** in Sales. Type who to bill and how much.	*"Invoice Bright Ideas £1,250 for website revamp due in 14 days"*
Draft Journal Adjustment	Click **AI Draft Journal** in Accounting for accruals or prepayments.	*"Accrue £1,200 audit fee for March"*
Financial & Tax Insights	Click **AI Commentary** on Profit & Loss or VAT reports.	*Produces executive summary of your income, profit margins, and tax due.*
Universal Assistant	Click ✨ **AI Assistant** in the top header on any page.	Instant natural-language drafting across Sales, Purchases, Banking, and Reports.

7. Clean Slate: Ready for Your Live Financial Data

Sample Data Cleared & Verified

All demo practice transactions (test invoices, practice bills, and demo statement lines) have been cleanly wiped from the system.

Your workspace is **100% clean and ready for real data**. You can now import your live bank statements, create genuine customer invoices, and add your team members with complete confidence.
